KEY FINDINGS AND RECOMMENDATIONS

1. Overtime is the strongest factor. **Employees working overtime leave at 31% vs 10% without (about 3x). Review workload and overtime policy.**

2. Role matters more than department. **Sales Representatives (~40%), Laboratory Technicians (~24%) and Human Resources (~23%) have the highest rates, vs ~3-5% for Research Directors and Managers. Prioritise retention actions for these roles.**

3. Early-career, lower-paid employees leave most: **Rates are ~36% for ages 18-25 and ~30% for 0-2 years of tenure, and leavers earn ~4.8K vs ~6.8K for stayers. Review starting pay and early progression.**

4. Other higher-risk groups: **single employees (~26% vs 10-12% for others), frequent travellers (25% vs 8% non-travel), and employees with job satisfaction of 1 (~23% vs ~11% at level 4).**

5. Gender shows no meaningful link to attrition (Cramér's V = 0.03)**. These are associations, not proven causes.**
Next step: exit interviews in sales and lab roles to confirm the reasons.
